

# Healthcare for Everyone

In 2006, 40 percent of U.S. corporations did not provide health insurance coverage to their employees. In Indiana alone, more than 14 percent of our population lacks health insurance.

What would happen to you if you didn't have health insurance?

What would happen to Indianapolis without Wishard?

## INSIDE WISHARD

With over 3,000 deliveries a year, Wishard Health Services has one of the busiest maternity centers in the city. To provide the greatest care for the most complex and severely ill babies, Wishard also offers a state-of-the-art Newborn Intensive Care Unit as well as beautiful rooms to provide a homelike atmosphere for our patients and their families.

Wishard – the largest safety net hospital in Indiana and one of the largest safety net providers of outpatient visits in the nation – is doing some remarkable things for our community. We serve the uninsured and underinsured, often treating people whose inability to pay means they haven't sought primary or preventive care. Every patient has access to all Wishard resources when needed, including Midtown Community Mental Health Center (Indiana's first community mental health center and the site of nearly three-quarters of a million patient visits in 2006), the nationally regarded Richard M. Fairbanks Burn Center at Wishard, IU National Center of Excellence in Women's Health and Lockefield Village Rehabilitation and Healthcare Center.

The Wishard Foundation creates relationships with donors, raises funds, engages volunteers and manages resources so that Wishard may continue to improve the quality of life for every member of our community. Please stand with Wishard and the hundreds of thousands of patients it cares for each year by supporting the Wishard Foundation today.
